InfoEx

Industry Standard for an Extraordinary Industry

The Industry Information Exchange (InfoEx) is a cooperative service managed by the Canadian Avalanche Association (CAA), providing a daily exchange of technical snow, weather and avalanche information for subscribers. Subscribers are organizations and commercial businesses employing CAA Professional Members and actively managing avalanche hazards during the winter months (e.g. backcountry skiing companies, BC Highways, mountain parks). InfoEx is a uniquely Canadian service giving avalanche professionals access to data that is accurate, relevant and real time. This knowledge improves each subscriber's awareness of the conditions across western Canada, greatly enhancing their ability to manage their local avalanche risks.

InfoEx also serves as one of the key sources of data used by the Canadian Avalanche Centre's public avalanche forecasters to produce and verify their products. The value of the InfoEx contribution to the CAC public avalanche bulletin is estimated at an excess of $2 million annually. The significance of this contribution by avalanche professionals and their employers to public avalanche safety in western Canada can not be overstated.
